I grew up in a small town in India with my parents and siblings. I was always fascinated by machines and how things work, which naturally led me to pursue a bachelor's degree in Electrical Engineering. After graduating, I spent about three years working as an electrical engineer across multiple sites in South India. During that time, my curiosity for tech kept growing stronger.

To explore that interest, I joined a startup called **Kliipmunk** as an intern—my first real step into the world of software. I learned a ton from the people around me and quickly realized I wanted to dive deeper, so I decided to get some formal education in the field. That decision took me to Canada, where I completed my Master's in Computer Science at **Bishop's University**.

Alongside my studies, I worked part-time as a developer at **SkyIT Services**, followed by **Space Age**. In my final semester, I interviewed at **MaintainX**, and it felt like an instant mutual fit. I joined the team right away, and since then, I've been growing with them at an incredible pace.

I now live in Montreal with my beautiful wife and our daughter. Outside of work, I'm really passionate about biking—my ride of choice is a matte black **Trek Domane**. I'm also a proud Potterhead (my wife is too), and Harry Potter marathons are an annual tradition in our house. When I'm not coding or biking, you'll probably find me on a long drive or planning the next travel adventure.
